Committed to the pursuit of excellence

The 2008 Annual Report & Guide to Doctors and Services is provided to give our community current healthcare information about our organization. This unique healthcare reference source consists of our Annual Report and our medical staff directory.

With the 2008 hospital expansion and the addition of millions of dollars in new clinical technology, this is the start of a new era in Onslow County healthcare.

Sincerely,

Ed Piper, Ph.D., FACHE
President & Chief Executive Officer

About this publication

We hope our 2008 Annual Report & Guide to Doctors and Services will serve as a handy resource for you in the months to come.

Pages 3 to 19 serve as our organization’s Annual Report. In this portion, you will find information about our major expansion project; our annual financial status and statistical updates; our benefits to the community; honors and achievements; our commitment to clinical advancement; and more.

Page 3 includes a brief guide to healthcare services available at OMH. For more information on these services, please visit www.onslow.org.

Pages 20 to 31 serve as our annual physician directory. On these pages you will find contact information for the many dedicated local doctors who serve our community in a wide variety of specialties. We are proud of our physician partners and we encourage you to keep this directory with your phone book as a resource to assist you in meeting the healthcare needs of your family.

This is a great time to be here in Onslow County. For our patients and for all of us at Onslow, it’s a new era.

We're launching a progressive new era for healthcare in Onslow County.

“This is the most significant healthcare event in this community in over 30 years,” said President and Chief Executive Officer Ed Piper, Ph.D.

After five years of planning and two years of construction, Onslow Memorial Hospital’s new Emergency Services and Surgical Pavilion has opened to rave reviews. Patients and visitors cite enhanced convenience, privacy and technology as major reasons for the community to celebrate this milestone. Of course, the all-new healing environment – with an emphasis on natural lighting – is a plus as well.

“The aesthetics speak for themselves,” said Perioperative Services Nurse Manager Kathy Schumacher, RN, who is pleased with the first impression patients have when entering the new facility.
The new Emergency Department offers fast access to vital healthcare services. This state-of-the-art facility features private patient rooms, enhanced triage and trauma care, and the latest in advanced clinical technology.

The new Surgical Pavilion features four large, modern operating suites. The key distinction is a surgical navigation system. This allows an emphasis on video-assisted and minimally invasive procedures, which boost surgical accuracy while reducing patient recovery times.
When you need healthcare, Onslow’s talented doctors, nurses and clinical staff are dedicated to one common commitment: getting you back to the things you love … quickly.
Fiber-optic technology gives OMH patients 24/7 access to specialists

by Jennifer Mackenzie ~ Contributing Writer

Imagine it’s 2 a.m. and the Emergency Department at Onslow Memorial Hospital has several patients who need a radiologist to read their X-rays. How long will it take to develop the film and have a radiologist drive to the hospital? What if someone needs a specialist who is not in Jacksonville – how long will that patient have to wait?

For OMH patients, the answer to these hypothetical questions is virtually no time at all. Thanks to the hospital’s new fiber-optic technology, patient data – including radiology images – can be sent anywhere, safely and securely, at unprecedented speeds.

With fiber-optic cabling and network hardware provided by Embarq, telemedicine – defined as the direct provision of clinical care through the use of telecommunications technology – is now a 24/7 reality at OMH.

“The best way to describe it,” says Steve Arthur, OMH’s MIS/Telecom Manager, “is that it’s like everyone is right here in the hospital at the same time, for the benefit of the patient. Physicians and specialists at remote locations can have the same information our people have, at virtually the exact same moment.”

According to Embarq Sales Executive Sherwood Odum, OMH is among the first hospitals in eastern North Carolina to make the switch to the new technology. Embarq, formerly the local division of Sprint Nextel, is the largest independent provider for high-speed data, wireless services, and local and long-distance phone service.

With the new multimedia service (voice, data and video), remote hospital-owned facilities and local physicians’ offices have immediate, secure access to their patients’ lab test results and status at OMH through the virtual private network (VPN) from their offices or their homes, explains Arthur.

The benefit to patients, says OMH Director of Imaging Services JoAnne Offutt, is perhaps most apparent in Emergency. “After hours,” says Offutt, “radiologists can look at the X-ray image from their home and send the ER a report.” In fact, she explains, the X-ray itself no longer needs to be produced as a piece of film.

“We now have PACS (Pictorial Archiving Communication System), so we no longer have X-ray film, so to speak. It’s all in the computer. Images can be stored and forwarded to our radiology group, Coastal Radiology, via the fiber-optic line.”

Sometimes those images are sent even farther — to Sydney, Australia. “NightHawk Radiology Services in Australia provides teleradiology services for us and for many hospitals across the U.S.,” explains Offutt. NightHawk radiologists are fully licensed in the U.S. and fully credentialed in the hospitals that use their services. Because of the time difference (it’s the middle of the day there when it’s the middle of the night here), they primarily provide extra coverage to emergency departments overnight.

As well as ensuring secure, fast access to specialists at remote locations, the new system “is exceptionally stable,” Arthur says. Because fiber-optic lines are buried, they’re not susceptible to lightning strikes and wind damage, a key benefit for hurricane-prone coastal North Carolina.

The implementation of the new technology, says Arthur, is all part of “OMH’s mission to give our patients in eastern North Carolina the best healthcare possible, by giving them fast access to the physician or specialist they need, day or night.”
Ed Piper, Ph.D., president and CEO of Onslow Memorial Hospital, was honored at a special event as the 2008 Distinguished Citizen of the Year by the county district of the Boy Scouts of America.

“We pick a citizen who embodies the idea of community service and leadership with integrity — and that’s really where Dr. Piper came in,” said Dr. Scott Johnston, chairman of the East Carolina Council’s White Oak River District of the Boy Scouts of America.

Johnston, a Jacksonville physician, said Piper’s role as president and CEO of Onslow Memorial Hospital has required “tenacity and a quiet steadfastness. He is a good and effective leader to have brought the hospital to where it is.”

That sentiment was seconded by the event’s keynote speaker: John P. Henderson III, chairman of the Onslow County Hospital Authority. Henderson credited Piper as being a key contributor to the hospital’s major financial turnaround over the past eight years, as well as its current large-scale expansion project.

But it is Piper’s strong sense of giving back to the community that made him especially suited for this award, Johnston said.

“Dr. Piper is what we hope young Scouts will become: a community leader who cares about what’s going on in their local areas,” he said. “His life in the community displays the values of Scouting.”

Besides participating in Jacksonville Rotary Club events and the American Cancer Society Relay for Life fund-raisers, Piper also has been a valued supporter of area Scouting.

To supplement the BSA’s council and district operating budgets, those involved in Scouting need to raise voluntary contributions annually. Donations from area businesses and individuals go a long way, but there is frequently a shortfall. That’s where Piper’s generous spirit has been a godsend.

Johnston said that during his three years as district chairman, Piper has seen to it that the budget is met. “At the end of the fund-raising year, if we haven’t met our budget, he fills the need,” Johnston said. “Whatever the amount, he fills it so there is no shortfall or deficit — when there is a need, he is right there.”

The Distinguished Citizen of the Year dinner is, in itself, a charity banquet to benefit district Scouting programs. Tickets are $100 apiece, and the leadership team had the ambitious goal of selling $15,000 worth, said Dan Cross, district director for the Scouts. Instead, ticket sales brought in close to $30,000.

The money will go a long way to help the approximately 1,700 youths and 600 adult volunteers involved in county Scouting programs. Besides the Cub Scout Packs and Boy Scout Troops familiar to most people, the BSA also has coed groups for ages 14-21, under the names Venturing Crews, Explorer Posts and Sea Scouts.

Johnston called the huge interest in the Distinguished Citizen of the Year banquet “a major tribute to Dr. Piper — an overwhelming positive response from people at the hospital and in the community at large who want to recognize Dr. Piper and support Scouting.”

Both Henderson and Johnston noted that Piper’s “genuine modesty” made him reticent to receive this honor. “He doesn’t like the spotlight — he only agreed to do it to benefit the Scouts,” Johnston said.

Piper said he is pleased to help the BSA, which he called “such a strong symbol of what America is about.” He said he deeply supports the group’s mission and appreciates its focus on building integrity in young people.

“I feel honored to be recognized for this award and to represent the hospital,” Piper said. “We as a society need to invest more into good youth programs. This is the next generation we’re talking about. So we (at Onslow) do all we can to support the Scouts.”

For more information on Scouting activities in the district, visit www.eccbsa.org or call District Director Dan Cross at (910) 340-7774.

Piper honored by BSA as Distinguished Citizen of the Year

Quick stroke response
New Emergency Department protocols succeed at reducing long-term damage

by Keryn Thompson-Kolar ~ Contributing Writer

For Jamie McGlaughon, it all started April 12 with a glass of water at 2:30 a.m.

“I woke in the middle of the night and went to get a drink,” said McGlaughon, a longtime Jacksonville businessman. “But I found that I couldn’t swallow. I thought I was having an allergic reaction ... I dressed myself and drove myself to the hospital.”

At the reception desk of the OMH Emergency Department, McGlaughon made a terrifying discovery. “That’s the first time I realized I couldn’t talk.” What he mistook for an allergic reaction was something far more serious: He was having a stroke.

A stroke occurs when blood flow to part of the brain stops or is dramatically reduced. Stroke is the third-leading cause of death in the United States, and it is the leading cause of serious, long-term disability.

The good news is that 80 percent of strokes are a type that can be treated by thrombolytic drugs – medications to dissolve clots that are blocking the flow of blood in the brain. But for this to happen, time is of the essence. Recognizing the warning signs of stroke and seeking treatment early can greatly reduce the chances of permanent damage.

“The window for stroke care is three hours from onset of symptoms,” said Nancy Pate, Clinical Care Coordinator in the OMH Emergency Department. “If a patient has had an ischemic area (an area of reduced blood supply) in the brain longer than three hours, those cells are dead. Also, the risk of adverse reaction from clot-busting medications begins to get greater than the benefits after three hours.

“Ignore that three-hour window, and that’s it,” she said. “You can’t get brain cells back.”

With this in mind, Onslow Memorial Hospital began work three years ago to form an interdisciplinary team to improve emergency stroke care.

It’s been a long process, according to Jo Malfitano, the hospital’s Performance Improvement and Accreditation Manager. She said Onslow’s team began collecting data in January 2006, seeking ways of developing what those in the medical community call “best practices” – recognized, evidence-based standards for care.

“It’s an opportunity for us to have a framework — what we need to do for our patients when they come in” with signs of stroke, she said.

“This team has been so committed,” she said. “It’s a wonderful mesh of interdisciplinary professions coming together to brainstorm — Emergency
nurses and physicians, Radiology, Pharmacy, Discharge Planning, the Lab, the Education Department.”

The result has been better screening policies, Malfitano said. Because a prompt diagnosis is vital, the Emergency staff is trained to detect early signs of stroke and then follow procedures to expedite the stroke patient’s assessment and care.

Pate said the stroke protocols at OMH have been “amazingly successful.”

“The cooperation between pre-hospital and hospital is really good. Everyone has worked really well together to understand the importance of time sensitivity with stroke patients.”

That’s exactly what occurred in Jamie McGlaughon’s case. Immediately upon his arrival in the Onslow Emergency Department, “The Emergency triage nurse (Edith Dyne) started trying to figure out why I was there, what was going on,” he said. “I was handing her things (such as a driver’s license) but I couldn’t speak. I couldn’t even sign in.

“When you lose the ability to communicate in every fashion, how do you then tell them what is wrong with you?” he said.

The answer was right at hand. Dyne gave him a flip chart listing symptoms of various ailments. It includes illustrations to get past language barriers.

Dysphasia – speech impairment — is “very frustrating to the patients,” Pate said. “They know what they want to say but can’t articulate it.” The flip chart helps patients describe what they’re experiencing.

Symptoms such as headache, confusion and slurred speech “are immediately brought to the attention of an Emergency physician,” Pate said.

“In stroke cases, our goal is to have a CT scan within 15 minutes of arrival, and we want the results in the physician’s hands within 30 minutes.”

“I went back into the ER straightaway,” McGlaughon said. “The staff was very well-organized and hypersensitive to my needs. There was very little wasted activity going on.”

The Emergency staff — including Dr. Charles Stafford, Dr. Jay Garrett, and nurses Julie Wareham, Maureen Wofford and Barbara Parker —

Is it a stroke? Act FAST...

**Face:** Ask the person to smile. Does one side of the face droop?

**Arms:** Ask the person to raise both arms. Does one arm drift downward?

**Speech:** Ask the person to repeat a simple sentence. Are the words slurred? Can the patient repeat the sentence correctly?

**Time** to call 9-1-1 right away if “yes” is the answer to any of these questions.

Source: National Stroke Association
performed a preliminary workup to rule out other conditions that can mimic a stroke. During this process, McLaughon realized he had another way of communicating. In his cell phone was the number for Dr. Michael Josilevich, the OMH Internal Medicine specialist who had treated him for a heart attack two years earlier. McLaughon dialed the number and handed his phone to a staff member. Shortly thereafter, Dr. Josilevich was at his side and consulting on the case.

The Emergency staff determined that the blood thinners McLaughon had been taking because of his heart condition would be a better choice for him than the commonly used Alteplase clot-busting drug. “They kept me in a nice, quiet environment and kept me monitored” for 24 hours, he said. When space opened up at the Stroke Center at Pitt County Memorial Hospital, McLaughon was transferred there by ambulance for further tests.

After his discharge a few days later, he got to know someone he calls “a brilliant lady” — OMH Speech Pathologist Jennifer Skehan. Their twice-weekly speech therapy sessions are helping McLaughon fine-tune his cognitive recall, finding new ways of reconnecting to data.

“I’m quite a proponent of Rehab at Onslow,” McLaughon said. “To have it done in your local hospital has to make your rehabilitation better. You’re not traveling, you’re not inconvenienced ... there are people closer to you who know about your situation.”

Brain cells that are destroyed by a stroke do not grow back, but the brain is remarkable in its ability to adapt. Physical therapy, occupational therapy, and speech and language therapy can help patients relearn skills they have lost.

McLaughon is grateful to have had such a positive outcome. He is back at work as an insurance agent, and one of the things he’s selling people on lately is the merits of OMH and its staff.

“‘Their expertise was exactly what I needed,’” he said. “From the first lady who checked me in, to the last person who escorted me out — everything done there was for my benefit. And it benefited me in a way that there has been no change in my life.”

His advice for people who think they may be having a stroke? “First, do what I did not do: Call the ambulance, the rescue workers. Give those professionals a chance to save your life.”

Pate couldn’t agree more. “A lot is done in that ride to the hospital — IVs, check blood pressure, check blood sugar, start an evaluation. Some patients go from ambulance stretcher straight to CT.”

But efforts must go beyond ambulances and the Emergency Department, Malfitano said. “The next step is to take this information out into the community, so that they can identify risks of stroke, recognize the signs and symptoms, and then call 911,” she said.

To that end, OMH has applied for and received a combined total of about $250,000 in grant funding from the North Carolina Collaborative Stroke Registry, the North Carolina Stroke Association, and the Kate B. Reynolds Charitable Trust. The goal is to have a stroke-care coordinator who partners with community health organizations to educate people about risk factors, symptoms, and the importance of seeking immediate medical help when stroke is suspected.

“We’re constantly reviewing our data, seeing what we can do to improve what we are doing,” Malfitano said. “We still have a lot of work to do.”

For more information, go to www.onslow.org and click on “Stroke Awareness.”
Risk factors for stroke include:

- High blood pressure
- High cholesterol
- Diabetes
- Smoking
- Family history of stroke
- Obesity
- Previous stroke(s)

*Smoking* is the leading preventable risk factor. Smokers are four times more likely to have a stroke than nonsmokers. Exposure to second-hand smoke may double a nonsmoker’s risk.

Source: National Stroke Association
Onslow Memorial Hospital can take pride not only in promoting a healthy community, but also in having healthy finances.

OMH has marked six consecutive years of positive financial reports, said Roy Smith, chief financial officer for the Hospital Authority. And this is despite an increase in charity-care write-offs of almost $1.4 million.

Smith credited the higher figure for charity care to two changes at OMH. “One, we modified policies for charity care to make it more inclusive, in recognition of the community we serve,” he said. “We’ve expanded the guidelines to make healthcare more available.

“Two, we’re doing a better job of identifying people who qualify” for charity care under the expanded eligibility criteria, he said.

Tim Strickland, OMH director of public relations and marketing, stressed the importance of helping people who are unable to pay for their care. Onslow is self-supporting, with revenues coming solely from patient care, but it will not turn away people in need.

“As a 501(c)3 nonprofit hospital, we have a strong commitment and mandate to serve our community in meaningful ways,” he said. “This includes the significant amount of charity care we provide, as well as other charitable efforts, such as donations, scholarships, and more.”

Operating expenses also are up from the previous fiscal year, reflecting increases in salaries and employee benefits.

“The nation is experiencing a healthcare workforce shortage,” Strickland said. “Onslow County is no different. We are working diligently to identify and produce local solutions to this shortage. Among other things, we have to constantly ensure that we are offering competitive wages and benefits to our employees, while at the same time making sure that we are serving as wise stewards of the resources entrusted to us.”

Onslow County Hospital Authority: Fiscal Year 2007
Annual Combined Statement of Revenues and Expenses

**REVENUES**
- Net patient services revenue: $95,318,877
- Other revenue: 1,233,018
- Total revenue: 96,551,895

**EXPENSES**
- Salaries and benefits: 49,739,032
- Medical supplies and other direct expenses: 16,215,681
- Physician fees and purchased services: 12,096,113
- Depreciation: 4,426,010
- Interest expense: 386,211
- Other expense: 11,296,299
- Total expenses: 94,159,346

**OPERATING INCOME**: 2,392,549

**NONOPERATING INCOME – Net**: 2,190,673

**AMOUNT REINVESTED IN THE COMMUNITY**: $4,583,222
One way to be wise stewards, Smith said, is to employ temporary workers when the need arises. The current financial report shows an increase in “physician fees and purchased services,” which reflects an industry-wide trend toward using contract personnel in certain disciplines (such as nursing and imaging) to supplement the in-house staff during times of peak patient volume, he said.

“Patient volumes have been stable in some areas, but continue to grow in others — outpatients especially,” Smith said.

On the financial statement, growth can be seen in the category of “non-operating income,” which doubled from the previous year. Smith attributed this remarkable gain to better revenue from investment earnings. “We are improving the cash position of the hospital through a change in the investment policy implemented by the hospital’s governing body. It decided to invest operating funds in a more aggressive manner” with the help of a professional fund management company, he said.

Both Smith and Strickland are happy with the Hospital Authority’s performance: The bottom line shows over $4.5 million reinvested in the community.

“We are pleased with the continued strengthening of our financial position,” Strickland said. “The hospital’s ability to construct our new Emergency Services and Surgical Pavilion has been made possible by strong operating performance and sound fiscal management.”

The $40 million building project is being funded by the sale of FHA-insured tax-exempt revenue bonds — no taxpayer dollars are involved, Smith said. Revenue from the bond issue will be used to outfit the new part of the hospital with cutting-edge medical equipment, as well as retrofitting and renovating the older part of the facility.

“The Authority continues to invest heavily in medical and information technology,” Smith said.

The announcement that OMH will build a new Radiation Oncology Center has fueled the re-establishment of the Onslow Memorial Hospital Foundation.

The Foundation is a nonprofit organization responsible for raising money to support the hospital’s mission. Foundation members are currently tasked with trying to raise a portion of the more than $7 million it will take to get this much-needed center in Onslow County.

On Feb. 28, 2009, the Foundation will host its first M*A*S*H Bash. Centered on the now-syndicated classic TV show, guests of the event will dress in scrubs, fatigues, Hawaiian shirts and Cpl. Klinger dresses to enjoy a very entertaining evening. “M*A*S*H” star Jamie Farr (who played Cpl. Klinger) will be the featured entertainer at the event.

In addition to hosting this special fund-raising event, the Foundation will be working on establishing an endowment and providing planned-giving and estate-planning educational programs.

Members of the Hospital Foundation Board include Rik Pugh (Chair), Grant Sparks (Vice Chair), Rod Martin (Treasurer), Carol Johnson (Assistant Treasurer), Budda Howard (Secretary), and LaRue Hambrick (Events Chair). Tim Strickland serves as Executive Director.

For more information about the OMH Foundation or to find out how you can get involved with our events, please visit www.onslow.org/foundation or call (910) 577-4736.

“M*A*S*H” star Jamie Farr, who portrayed Cpl. Klinger, will be the featured entertainer at the OMH Foundation M*A*S*H Bash event Feb. 28, 2009.
Website tool gives patients the power of information

by Keryn Thompson-Kolar ~ Contributing Writer

Americans today have a major hand in their own healthcare – and, quite often, that hand is on a computer mouse.

Searching the Internet for healthcare information is becoming more widespread, and that is providing a great opportunity for Onslow Memorial Hospital's website. OMH’s comprehensive patient-education section is up and running.

Called Ohealthy, the portal provides users with reliable medical information, the latest health news, and much more. With tools provided by Ohealthy, “you can become an active participant in enhancing your healthy lifestyle,” the site promises. Users can research various diseases, treatments, prescription drugs and health risks. They can keep up with the top stories in the medical world through updates by the HealthDay news organization. And they can even test their knowledge of dozens of health topics with interactive quizzes.

“This is yet another exciting step forward for patients in our community,” said Tim Strickland, director of PR/Marketing. “Ohealthy provides a rich and interactive way for people to look into their own health conditions. Our national patient safety goals call for hospitals to get patients more directly involved in their care. Ohealthy is an excellent resource to help accomplish this goal.”

Here is some of what you’ll find when you click on the Ohealthy button at www.onslow.org:

An encyclopedia of more than 835 diseases and medical conditions. You can browse them alphabetically, or use the search function to go directly to the disease you wish to learn about. Entries provide background information and also list symptoms, treatment options, and (when applicable) self-care tips.

An encyclopedia of more than 370 surgeries and procedures. These entries feature color illustrations designed to clarify complicated anatomy and procedures. Also noted are ways to speed healing after specific surgeries, and signs of trouble that recuperating patients should be alert for. For some medical procedures, you can even use the site to access high-quality animation sequences that show in detail how the procedure is done.

A drug reference library covering prescription and over-the-counter drugs. This area of the site provides details on 33,000 medications – an enormously beneficial resource. Search by the medicine’s name … or just part of the name … or even a physical description of a tablet. You’ll get important information on drug uses, interactions, side effects, dosing, storage, brand names and generic equivalents.

A database detailing commonly used herbs, vitamins and supplements. Both the medically valid uses and the unsubstantiated claims are revealed, along with recommended intake, valuable food sources, toxicity warnings, and more.

Health and wellness articles. Just pick a topic. There are more than 1,700 helpful reports on various diseases and conditions, plus subjects such as fitness, nutrition, safety, parenting and workplace issues.

Daily health news and quick tips. Trend stories, research breakthroughs, clinical trial updates, and practical suggestions for staying healthy – it’s all here, and updated daily.

Healthy recipes database. There are currently more than 100 tantalizing recipes to choose from, including many vegetarian selections. Some feature color photos, and all provide nutritional information per serving. For even more nutrition knowhow, you can use the site to check out the USDA’s latest data on common foods. The Nutrition Facts database is searchable by
food type, category or product name. You can even get stats for the menu at your favorite fast-food restaurant.

Collections of articles – called “modules” – that address specific needs and stages of life. High blood pressure, smoking, stress, weight management. Asthma, diabetes, heart health, vaccinations. Pregnancy, women’s issues, children’s health, advances in geriatrics. These are just some of the subjects covered in detail, with a focus on promoting wellness.

In addition to all this, there are interactive tools. These include 12 different calculators (for issues like body mass index); 13 risk-assessment measures (could osteoporosis be in your future?); and those quizzes that make learning fun.

Think you’ll be bleary-eyed by the time you’ve taken it all in? Don’t worry. At Ohealthy, there’s even a simple way to make the words on the screen bigger and easier to read.

All with the click of a mouse.

To learn more, go to www.onslow.org and click on the Ohealthy logo.
The chairman of the Onslow County Hospital Authority has been honored by a statewide hospital organization for his stellar leadership.

John P. Henderson III, who has served in various roles on the hospital authority board during his seven-year tenure, was selected as a Trustee of the Year by the North Carolina Hospital Association. Henderson received the award at the group’s annual Leaders Institute, held at the Pinehurst Resort.

The NCHA, which represents 135 hospitals and health networks throughout North Carolina, aims to promote delivery of quality healthcare through leadership, information, education, and advocacy. Since 1992, the organization has annually recognized hospital trustees who have made a significant and unique contribution to their hospitals and the communities they serve. This year, six individuals were selected as Trustees of the Year from among the state’s 1,200-plus hospital board members.

Ed Piper, Ph.D., Onslow Memorial Hospital’s president and CEO, said he nominated Henderson for the award because of Henderson’s “vision, foresight, stewardship and steadiness.”

“He has served in several positions of increasing responsibility: on the Planning and Building Committee, on the Finance Committee, as vice chairman and now as chairman” of the authority board, Piper said. “He has faced many daunting challenges relating to finance, recruiting, strategic planning and facilities planning. His engaging charisma, focus, energy and stamina have helped accomplish things this community needs for healthcare.”

OMH was in difficult circumstances when Henderson began his board tenure in 2000 — that year, the hospital faced financial losses, was plagued by low morale on the staff, and had to confront an aging physical plant. Henderson helped initiate plans for capital upgrades and improved budget oversight, while also assisting in physician recruiting and elevating the hospital’s work ethic and culture. The healing progressed quickly: Today, OMH is in its sixth year of profit margins averaging 3 percent, and this summer it unveiled a new $40 million Emergency Services and Surgical Pavilion that’s loaded with millions of dollars’ worth of state-of-the-art equipment. Also in the works is a radiation oncology center; a cardiac center is in the planning stages.

“Mr. Henderson helped assess needs and demands, then went to Washington and New York City to pursue bonds” that have made the current hospital expansion a reality, Piper said. “As chairman, he defines the role of the board, provides oversight, and then lets the executive team do its job of running the hospital.”

Piper said the Trustee of the Year award from the NCHA is a testament to Henderson’s hard work and vision, but also to his intuition.

“You can’t buy that — it’s either there or it’s not,” Piper said.

“Ed Piper, Ph.D., … nominated Henderson for [his] ‘vision, foresight, stewardship and steadiness.’”
A special thanks from John Henderson

by John P. Henderson III ~ Chair, Onslow County Hospital Authority

I am most grateful to have been selected for the “Trustee of the Year” award. In the course of life one rarely has the opportunity to dramatically impact change. Truly, I am the beneficiary in the relationship!

I have enjoyed the distinct honor and privilege to observe committed professionals perform exceptionally. Their passion — molded through patient determination, coupled with their willingness to stay the course — has been a daunting task for their adversaries to understand. The achievements of the Onslow County Hospital Authority and Onslow Memorial Hospital are examples of well-planned and executed teamwork.

I am extremely grateful for the assemblage of our senior staff: Their professionalism and leadership have been exemplary. I will continue to encourage the senior staff and all Onslow Memorial Hospital employees to look upon their daily confrontations as one of the ingredients that fire the passion in their souls. Our employees are special people whose dedication to caregiving often exceeds the patient’s expectations. They have to work under adverse circumstances and conditions in hope of a better tomorrow. It is one of our duties to improve those conditions and circumstances, and we will accomplish this. There has been dramatic change at Onslow Memorial, and it is a direct result of the efforts of those mentioned above.

In closing, it has been an honor and a privilege to serve with those fellow board members who have given so unselfishly of their time. We are fortunate to have been entrusted with the opportunity to dramatically impact change. Let us continue to travel the “high road.” Remember, passion is a powerful force that cannot be stopped!
